

Agrodem – Install Create base grid plugin

In order to automate the process of generating a base grid, the KTH-dES team has developed a QGIS-based plugin. This brief document will go through how to install the plugin and make it available for use in QGIS

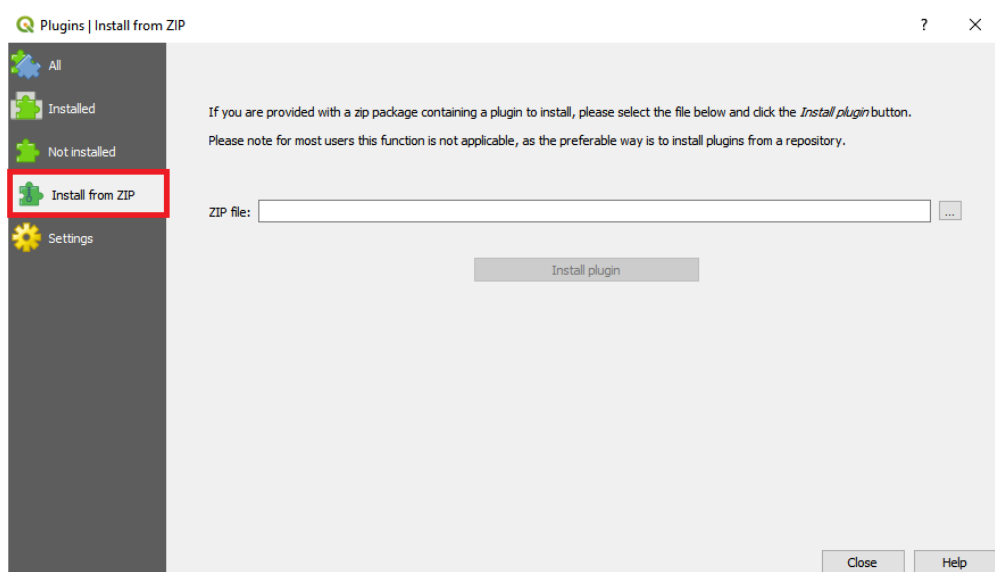

1. Download the zipped folder onto your computer.
2. Open **QGIS Desktop** make sure that you use version 3.4.
3. On top of the window you have a number of menus, click on the one that reads **Plugins**.

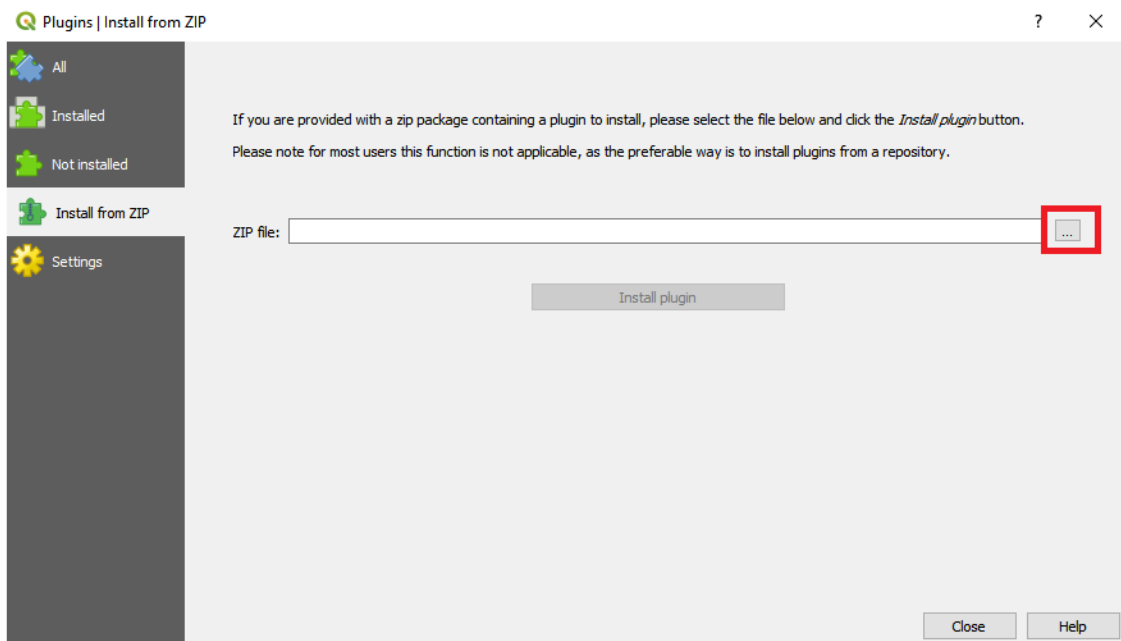

4. Next, go to **Manage and Install Plugins...**

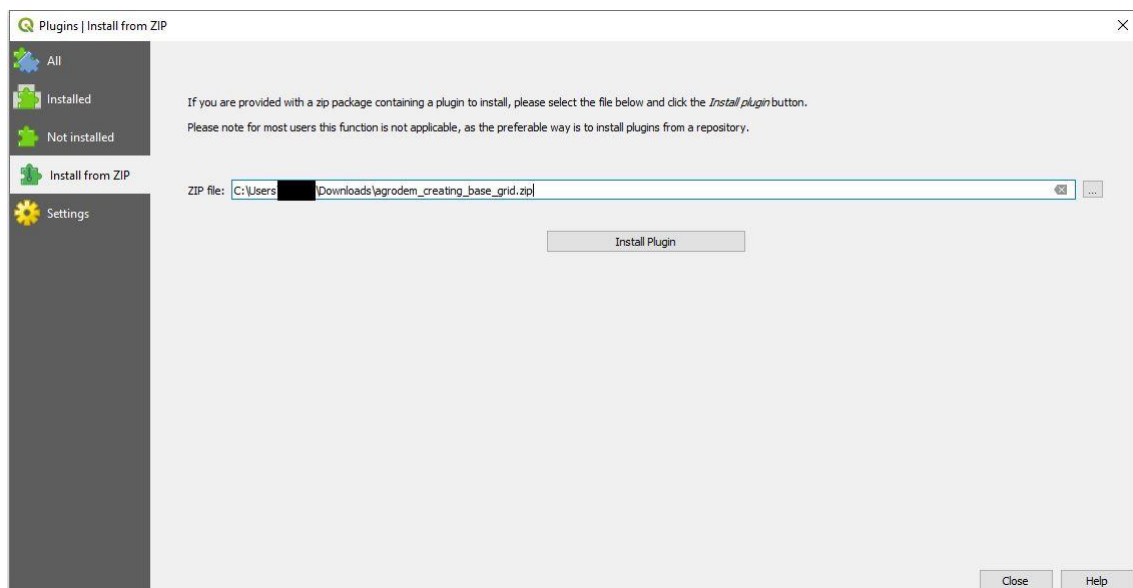

5. This will open a new window with a number of different options on the left-hand side. Choose **Install from ZIP**.

6. In the window that opens click on the three dots next to the empty field to navigate to wherever you saved the zipped plugin folder.

7. When you have found it click **Install plugin**.

8. After the plugin has been installed will appear under the **Plugins** menu on top of the screen. You are now ready to run the plugin.
